ABSTRACT OF THE DISCLOSURE

TO THE MELLINE MERCHANICAL SERVICES AND THE PROPERTY OF THE SERVICE SERVICES AND THE SERVICES TO THE ADMINISTRATION OF THE SERVICES AND THE SE

An occupant determination device for a vehicle seat includes a load sensor provided at a seat body, a controller for calculating a detection load value based on a load value output from the load sensor and for determining an occupant sitting on the vehicle seat by comparing the detection load value and a predetermined threshold value, a determining means for determining whether or not a child restraint system is equipped on the vehicle seat based on a variation of the detection load value and a detecting means for detecting whether or not the vehicle is stopped. When a vehicle stop condition is not detected by the detecting means, the determining means does not determine whether or not the child restraint system is equipped on the seat.
